
Kwick Slide Vertical Menu no working in IE7?

Posted by Jon Mannall - 2008/05/16 11:48

I have installed Kwick Slide vertical menu and it works great in Mozilla but is not displaying in IE7?

It does not seem the template is dynamically recognizing the module dimensions?

Any ideas?

:huh:

Yes Jon, for now, this module(either for J!1.0 or for J!1.5) can't work in IE7. We sorry about that but we will try to fix it as soon as possible. After we fix it we will announce that in this forum.

Hello

I fix the problem for ie6 and tomorrow will test it on ie7.

How i can upload the file patched?

I really think that module is great and wanto help.

You can sent your updated module to camp26team gmail com, let we review that first and then we will decide later for upload to download area or not.

Thank you for your help but let you know that we have also updated the module so now can work well with IE7.
