## Carousel Banner problem with IE6

Posted by gbox - 2008/06/30 07:48

---

Hi!

I work with Joomla 1.5. I have strange problem with Carousel Banner and IE6 (with IE7, Firefox and Netscape works fine).

When I open the main page everything looks ok but when I click on any position from the main menu (like "o nas") the page doesn't load at all – even when I click on the main page on item "start" from the main menu this problem has occur. In administration panel I have published Carousel Banner in all items from the main menu. When I mark Carousel Banner unpublished everything works ok.

I need your help

Url of my test site is following: <http://www.prooptimum.nazwa.pl/j15>

Thanks !

gbox

Hello gbox,

I've see and try that at your live site url, but it's ok i've use standalone IE6, no problem that i can find

:unsure: or maybe i lost something?

Regards  
Ronysyz

thanks for your attention ! I will try to check this on different installation of IE6. However when I have tried this on my local host everything was ok, but not on the www server – based on this I thought that something might be wrong with the settings , which doesn't allow Super CB to work properly on IE6.

I have tried on another two computers with IE6; unfortunately there is still the same problem; initially everything looks ok but when I choose any position form the menu list like "start" or "o nas" the side cannot be load or you must waiting few minutes for that; it is strange because when I unpublished GK module everything works ok, additionally as I have written before when I have tried this on my local host everything was ok. Is it possible that the problem is related with the www server settings ?

Yes, i think the problem is with your web hosting.  
Please contact it first.
