
Operation aborted Error message in IE..

Posted by Robert Wright - 2008/07/01 01:13

Getting the operation aborted error message when viewing the site www.limelight-inc.com. FireFox works fine, only IE is producing the problem..

Have you try to disable the caching of the module?

Here the way : Go to Extensions > Module Manager in the Administrator panel for Joomla, we can override the cache settings for this module. Under Parameters in the properties of the module, select "Advanced Parameters" > Caching = No Caching

Thank you for that information. It seems plausible, however I am unable to locate the settings that you are speaking of. I checked the module itself and it doesn't have an advanced feature. I am also having the same problem with another module not related to yours. So I am thinking that it might be the template. Any suggestions?

Robert, Let us know what the details version of your Joomla?
yes we are know it's joomla 1.5.x but what version, Joomla 1.5.1 or 1.5.2 or 1.5. RC?

Hello Robert, today I see your website and I don't see camp26's module there and there is still error operation aborted in IE7. With this case I can concluded that the error of your website in IE is not because our module, please you check with the another module, I suspect its because mod_xbanners.

Regards,

Denny S.P.
