
Kwickstart vertical menu- copy doesn't work

Posted by Leena - 2008/08/21 00:20

Hi,

I am using Kwick start vertical menu for Joomla 1.5.

I want to use to two places with two diff. menu. I selcted checkbox next to module copied it(it works with other joomla module-the copy method) inorder to create another instance but it doesn't work.

If I change images in second one it reflects in the first position.

Can you please suggest if it is possible.

Other wise module works fine.

Thanks
